PROFESSIONAL SUMMARY

Product Support and VoIP Network Engineer with 7+ years of experience turning complex voice, network, API, and customer-reported issues into clear root-cause findings and practical next steps.

- **Current focus:** Supporting Telnyx customers across communications and connectivity products, including Voice API, SMS API, Fax API, customer communication, technical investigation, escalation notes, and documentation.
- **Troubleshooting depth:** Strong hands-on background in SIP/RTP, hosted PBX, SIP trunks, DNS, NAT, routing, Linux/log analysis, APIs, packet captures, and customer edge equipment.
- **Support mindset:** Known for digging into traces and logs, explaining technical issues clearly, improving repeatable workflows, and building tools that make support faster and easier to understand.

CORE SKILLS

VoIP and SIP troubleshooting: SIP registration, SIP trunks, hosted PBX, DID/SMS routing, IVR, call queues, voicemail, conference bridges, INVITE/REINVITE/REFER flows, SIP responses, SDP, DTMF, RTP/RTCP, codecs, one-way audio, jitter, packet loss, PDV, and PDD.

Networking and customer-edge issues: DNS, DHCP, NAT, UDP timeouts, IP addressing, routing, HTTP/HTTPS, provisioning, BLF/SUBSCRIBE/NOTIFY behavior, firewall or router symptoms, call routing, and media-quality isolation.

APIs, logs, and support investigation: REST APIs, Voice API, SMS API, Fax API, webhooks, Postman, cURL, Linux terminal workflows, MySQL, log review, Netsapiens API, bulk changes, reporting, customer-ready findings, and self-service documentation.

Diagnostic and support tools: Wireshark, sngrep, HOMER, VoIPMonitor, Netsapiens, Asterisk, FreePBX, 2600Hz KAZOO, Grafana, Zendesk, Slack, Jira, Google Workspace, GitHub, SuperPuTTY, and Advanced IP Scanner.

Devices and network vendors: Yealink, Polycom, Grandstream, Cisco, Snom, VTech, Fanvil, Fortinet, SonicWall, Meraki, Edgemark, SimpleWAN, Cradlepoint, Ubiquiti, and Netgear.

PROFESSIONAL EXPERIENCE

Product Support Engineer | Telnyx | Remote / APAC | 2024 - Present

- **Customer issue ownership:** Troubleshoot communications, networking, API, and platform integration cases from first review through resolution, vendor coordination, or engineering escalation.
- **Technical investigation:** Review SIP/RTP behavior, call routing, registration failures, media quality, DNS/IP path issues, logs, Voice API, SMS API, Fax API requests, and webhook behavior to identify the most likely failure point.
- **Diagnostic workflow:** Use Postman, cURL, Linux terminal workflows, packet analysis, Zendesk, Slack, Jira, Google Workspace, and internal tools to gather evidence and keep cases moving.
- **Cross-team communication:** Provide customers and engineering teams with reproduction steps, trace evidence, clear technical notes, and explanations that are accurate without being needlessly complicated.
- **Process improvement:** Document recurring issues and look for support workflows that can be improved through automation, self-service resources, scripts, or bot-assisted triage.

VoIP Network Engineer | Vivant Corporation | Philippines | March 2023 - November 2023

- **Voice platform support:** Configured and maintained Asterisk, FreePBX, and 2600Hz KAZOO environments for internal and customer communication workflows.
- **Remote network operations:** Managed network equipment through SSH tools and SD-WAN architecture, including Cradlepoint routers, ISP devices, Grandstream phones, Ubiquiti WAPs, and Netgear switches.
- **Monitoring and troubleshooting:** Used Grafana to monitor service health and investigated SIP calls or voice-quality symptoms with VoIPMonitor and Wireshark.
- **Documentation:** Created process documentation to make repeat work easier to follow and improve handoff quality for future support or operations tasks.

NOC Support Engineer, Tier I-III | Skyswitch | Remote | January 2019 - January 2023

- **Escalation growth:** Promoted from Tier I to Tier III support, moving from frontline customer incidents into escalated SIP/RTP, hosted PBX, SIP trunk, provisioning, routing, and voice-quality cases.
- **Hosted PBX administration:** Supported Netsapiens configuration for users, SIP devices, voicemail, IVRs and auto attendants, queues and agents, conference bridges, call routing rules, time frames, DID routing, and SMS routing.
- **Registration and provisioning:** Resolved issues involving DHCP, NAT, UDP port timeouts, DNS, SIP expiry headers, vendor ZTP servers, TFTP/HTTP provisioning, firmware upgrades, and device configuration overrides.
- **Call-flow and media analysis:** Analyzed SIP handshakes and media behavior, including INVITE/REINVITE/REFER flows, SIP responses, SDP, codec matching, RTP/RTCP, DTMF, QoS, packet loss, jitter, PDV, and post-dial delay.
- **Device and vendor support:** Supported hard phones, softphones, SBCs, IP-PBXs, legacy PBXs, analog gateways, and customer edge devices across Yealink, Polycom, Grandstream, Cisco, Snom, VTech, Fanvil, Fortinet, SonicWall, Meraki, SimpleWAN, and Edgemark.
- **SIP trunk maintenance:** Maintained customer SIP trunks for on-premise environments such as 3CX, Avaya, Asterisk, Yeastar, Cisco, and Grandstream UCM, using MySQL, Postman, Netsapiens API, HOMER, VoIPMonitor, Wireshark, SuperPuTTY, and Advanced IP Scanner.

EDUCATION

Bachelor of Science in Electronics and Communications Engineering | The University of St. La Salle | 2012 - 2017

CERTIFICATIONS AND RECOGNITION

- ECE and ECT Board Exam Passer
- Cisco Certified Network Associate (CCNA 200-125), July 2018 - January 2022 | [Credential](#)

SUPPORT TOOLING INITIATIVE

TraceRoo | Network, VoIP, DNS and PCAP troubleshooting toolkit | traceroo.com

- **Built the site:** Created and published a responsive static web toolkit with HTML, CSS, and JavaScript, including browser-local packet-capture review so uploaded PCAP data can be analyzed without leaving the user's browser.
- **PCAP and VoIP tools:** Built tools such as SIP Ladder Tree, RTP Health Analyzer, PCAP Splitter by SIP Call-ID, PCAP Redactor, SRTP PCAP Decoder, and PCAP to WAV extraction for clear RTP audio.
- **Support utility library:** Added practical checks for DNS lookup and propagation, SIP DNS/NAPTR/SRV, MTR, traceroute, TCP ports, TLS certificates, SPF/DMARC/DKIM, subnet calculation, VoIP bandwidth, CNAM, number risk, and fax testing.
- **Troubleshooting content:** Wrote guides and field notes that explain results in support-friendly language for issues such as one-way audio, RTP jitter/loss, DNS propagation, email authentication, and MTR interpretation.
